Abstract (en)
[origin: WO0212629A1] A device for nonpositively fixing a bracket (1) to a supporting base body (2), especially a travel way body for railborne vehicles, has a tension member (7) which protrudes partially from the supporting base body (2) and extends partially in the supporting base body (2). The point of exit of the protruding part of the tension member (7) is located in a recess (12) of the supporting base body (2). A support element (8) can be arranged at least partially over the protruding part of the tension member (7), at least the front end of the support element (8) lying in the recess (12) of said supporting base body (2). The bracket (1) is located on the support element (8).
