Abstract (en)

[origin: WO0208543A1] To effectively improve the durability against polishing of a floor sheet by placing a seal part having an improved material and shape on the periphery of edges of the floor sheet bonded to a floor surface. A floor-surface covering structure, comprising: a floor of a building; a floor sheet having an outside size smaller than the size of the floor surface, bonded to the surface of the floor (floor surface); and a seal part that is placed along the edge of the floor sheet and set to the edge and the floor surface, wherein: a material of the seal part is an epoxy resin or a polyester resin, and the seal part has a width that is substantially uniform when viewed in a direction vertical to the floor surface.
