Abstract (en)
[origin: WO0210641A1] The invention concerns a fixture comprising a tubular profiled section (2) made of synthetic material, with square or rectangular cross-section, a support (10) for the electrical components, consisting of a metal plate with elastic properties, comprising a base (12) designed to be supported against one (3) of the surfaces of the profiled section, extended by two end folds (14) which are substantially perpendicular, and likewise extended by two opposite wings (16) whereof the ends are designed to be urged to be anchored in the top wall (4) of the profiled section, and two closure caps (28) for the profiled section ends each comprising a part, which arranged to be nested in the profiled section (2), is equipped with a ring type joint (30). The invention is useful for equipping enclosed spaces such as aquariums, garden ponds or fountains.
