Abstract (en)
[origin: WO0188774A1] The invention relates to a method and a system for simulating a transportation process when transporting goods from an initial location to a subsequent location. By simulating the transportation process it is possible to enter operational data related to the packing machine and subsequently view the packing process on a user interface of the simulating system. Accordingly the invention also relates to a user interface of the simulating system and to a user of the simulating system. The user interface comprises buttons for manipulating the transportation process and it is possible in the user interface to enter and to alter operational data in order to optimise the transportation process.
