Abstract (en)
[origin: WO0213212A1] The invention concerns an integrated inductor (20), consisting of a flat winding of one or several turns (21, 22, 23) made of a conductive material above a substrate provided with at least a subjacent conductive level wherein is produced, through a contact pick-up strip (12'), at least an intersection of the winding, the width of at least one turn and/or one interval between two turns being reduced in line with said contact pick-up strip.
