Abstract (en)

[origin: EP1306122A1] A homogenizing device for a powder material comprises a homogenization chamber (33) filled with powder material, and a first rotor (38) and a second rotor (22) arranged a distance apart. The two rotors rotate in different directions to produce counter flows to comminute the powder material. <??>An Independent claim is also included for homogenizing a powder material. <??>Preferred Features: The rotors rotate at the same speed. A synchronization device (48) synchronizes a drive for the first rotor and a drive for the second rotor. The rotation axes (44, 46) of the rotors coincide.
