Abstract (en)

[origin: EP1306177A2] Several pick-up devices (3) for pressing tools work alongside an actual press (2). Set up as adapters (5), the pressing tools have top and bottom molding parts. A tool-displacement device (4) moves each tool to and fro between the press and a tool-pick-up device. Using an adapter-type tool facilitates the provision of a swiveling device that swivels a whole adapter with integrated top and bottom molding parts.
