Abstract (en)  
[origin: EP1306321A1] The invention relates to a system for collecting waste, comprising: diverse containers (6) for disposing at least partly in the ground at a distance from each other; a vehicle (1) with a loading space (2) for receiving therein the refuse from the container; and lifting and tilting means (8) which are connected to the vehicle and provided with engaging means (13) for engaging and lifting the container in the vicinity of the vehicle and tilting the container at an opening (4) in the loading space in order to empty the content thereof into the loading space. Between the vehicle and the engaging means there is arranged a positioning mechanism (8) with which the engaging means can be positioned in accordance with at least the position of the container relative to the vehicle. <IMAGE>
