Abstract (en)
[origin: EP1306500A1] A procedure for the construction of seals for DIY that consists of upper and lower horizontal billets (5), as well as intermediate reinforcement sections (10) and billets (5), and the vertical bar or section type elements (6). The join between the vertical elements (6) and the upper and lower billets is made by means of breakable screws (4) passing through the joins (1), (2) or (3) with the head hidden in a recess (5.1) as well as the end of the vertical element (6). An intermediate piece (7) may be used. The join with the horizontal reinforcement elements is made either using passing screws that have a stepping between the main stud and the thread ensuring and improving the join with the open and closed sections, or making use of joinable bars (6) by means of a threaded screw that leaves the reinforcement billets (5) pressed against one another. <IMAGE>
