Abstract (en)

[origin: EP1306622A1] Rail system comprises a food container having a holding bar (2) on each side connected to the front end of the food container via a U-shaped connecting section and extending parallel to the side edges of the food container, and telescopic rails (4) consisting of one stationary rail (4a) fixed on or behind the side wall of the oven and a moving rail (4b) which can be pulled out of the oven. A receiving sleeve (5) provided on the moving rail extends over the length of the rail to form a unit. The receiving tube is open in the direction of the oven opening and the holding bar slides into it. The holding bar and the receiving tube have a hook (6) and a catch (7) for removable engagement of the holding bar and the receiving tube to prevent the holding bar sliding out of the receiving tube. <??>Preferred Features: The hook is formed on the holding bar and the catch is formed on the receiving tube in the form of a recess or opening.
