Abstract (en)

[origin: EP1307072A2] The method involves processing, amplifying and outputting an electrical signal from a hearing aid transducer. A switching unit is triggered for switching and slidably transitioning the hearing aid between two operating condition, and generating two signals. The two signals are operated with a weighting function which first increases and second decreases with the switching event. <??>An Independent claim is also included for a hearing aid.

[origin: EP1307072A2] The method involves processing, amplifying and outputting an electrical signal from a hearing aid transducer. A switching unit is triggered for switching and slidably transitioning the hearing aid between two operating condition, and generating two signals. The two signals are operated with a weighting function which first increases and second decreases with the switching event. An Independent claim is also included for a hearing aid.
