Abstract (en)  
[origin: WO0211933A1] The invention relates to a hand-operated machine tool with a tool mounting which may be driven, at least in a rotating manner, by means of a drive motor and a drilling spindle (13), comprising a chuck, for fixing tools, which may be actuated in the direction of rotation of the drilling spindle (13) and a locking device (38), by means of which the drilling spindle (13) can be fixed in a non-rotating manner to a part (27) of the machine housing (26), for the closing and opening of the chuck on the tool holder (12). Said locking device (38) automatically releases on a transfer of torque from the drive motor to the tool mounting (12) and which automatically locks on a transfer of torque from the tool mounting (12) to the drive motor and is arranged on an intermediate shaft (17), in combination with a safety clutch (58) which is also arranged on the intermediate shaft (17).
