Abstract (en)
[origin: WO0204845A1] The invention relates to a sealing system for an assembly (10), comprising a part (11) that has a wall (16) with a front-face groove (20) in which a rubber-elastic seal (27) is disposed. Said seal (27) extends, in the unloaded state, beyond two grooved cheeks (22, 25) of the groove (20). The outer grooved cheek (22) is provided with a nose-shaped projection (23), while the inner grooved cheek (25) has a lower height vis-à-vis the grooved cheek (22) and has a wedge-shaped cross-section. The projection (23) of the grooved cheek (22) and the seal (27) interact to give a sealing system whose effect in the loaded state is due both to a plastic deformation of the projection (23) on a surface (14) of a part (12) and to the force with which the seal (27) is retained in the groove (20).
