Abstract (en)

[origin: WO0215163A1] The invention concerns a method for controlling a matrix plasma panel cells, consisting of cells (4) arranged at the intersections of lines (6) and columns (8), comprising a step which consists in sequentially applying to each line an activating potential and, during a line activation, in applying an activation potential to selected columns, wherein while a line is being activated, the selected columns are activated non-simultaneously.
