Abstract (en)  
[origin: EP1308106A2] The unit (1) includes a reservoir (2) which accommodates compound applied by an applicator. Before using, the applicator is placed from one end (10) into the other end (9) of the reservoir so that the applicator stands out freely from reservoir and any compound in the reservoir can flow from the reservoir onto the applicator. <??>A recess, formed at one end of the reservoir, accommodates the applicator and is closed towards the interior of the reservoir. A feed inlet and outlet (8) is provided at the opposing other end of the reservoir.
