Abstract (en)

[origin: EP1308245A2] The clamping chuck has a slit (5) for a sheet piece (6) which acts with an arresting function on the tool stem end. This slit is wider than the sheet piece itself, so that the sheet piece can move longitudinally. It can thus be taken out of engagement with the clamping surface (11) of the bush (7) along the endface of the tool stem.
