Abstract (en)
The present invention relates to a sleeve for tap hole of a waste gasifying and melting furnace which is formed with an internal sleeve made of a refractory material less liable to be melted by molten slag and an external sleeve made of a refractory material capable of being cut easily by boring, the external sleeve being provided on the external surface of the internal sleeve. The sleeve for tap hole in accordance with the present invention can be exchanged easily without much labor and time. <IMAGE>
