Abstract (en)
[origin: EP1309154A2] A method of selecting a resource for providing a service from a set of resources on a network, using a mobile device. The method includes the steps of sending a set infrared link message by infrared communication from the mobile device, the set infrared link message including a set of network addresses corresponding to the set of resources, and receiving the set infrared link message at the resource. The method also includes the step of determining if the resource is included in the set of resources and sending a set infrared link confirmation message by infrared communication from the resource to the mobile device. The infrared link confirmation message confirms that the resource is included in the set of resources and provides a network address of the resource.
