Abstract (en)
[origin: WO0211918A1] Device for straightening vehicles, comprising a lifting table (1) and a tensile straightening appliance (11) that can be coupled to the lifting table. The tensile straightening appliance is designed after coupling to the lifting table to be involved in the movements thereof, and comprises elements (12, 13) for generating a tensile force in a tensile element intended to be coupled to the desired part of a vehicle clamped to the lifting table. The lifting table (1) and the tensile straightening appliance (11) are designed with interacting coupling elements (20), which are designed to allow the tensile straightening appliance (11), after coupling to the lifting table (1), to be swivelled essentially in the plane of the lifting table relative to a longitudinal axis of the latter. The invention also relates to a lifting table and a tensile straightening appliances intended for use in a device for straightening vehicles.
