Abstract (en)
[origin: DE10040229C1] The device has an underlay (3) with an opening, which is not further than the length of the smallest letter from a support wall (4), against which the letters are stacked. An arched support finger (5) slides upwards through the opening and into the stack and is moved by a controlled drive mechanism. The support finger extends from the opening to the support wall and is curved towards the support mechanism.
