Abstract (en)

[origin: EP1180756A1] A prepaid shopping application runs on the same server, on which prepaid accounts of both recipients and senders of money are managed. A recipient of money subscribes to a money transfer service with a dedicated data file with a transaction call number for the recipient's terminal in a telecommunications network and an account ID for the recipient's credit balance. Sale/purchase input, connection and transaction can be completed via a mobile/static telephone.
