Abstract (en)

[origin: EP1310360A2] The printing position of the format cylinder (104) and of the screen roller(105) is set by placing the format cylinder against the counter-pressure roller (103), and the screen roller against the format cylinder with a manually operated placement device (2,115,116,108,112,107,111). The format cylinder and or screen roller is removed from the manually set position and restored to the same position by at least one drive mechanism(124).
