Abstract (en)

Air conditioning device to humidify or de-humidify articles, comprising a chamber (11) wherein there is a plurality of transport means (12) one above the other and able to translate the articles substantially in a single direction of feed from an entrance (11a) to an exit (11b) of the chamber (11). The articles (13) arranged in the same vertical portion of the chamber (11) are in substantially the same condition at least of humidity. The chamber (11) is associated with at least a means to deliver and circulate air (23, 26, 27) able to create a flow of conditioned air with parameters at least of humidity substantially correlated to the humidity of the articles (13), which humidity varies gradually between entrance (11a) and exit (11b) of the chamber (11). <IMAGE>
