Abstract (en)

[origin: EP1310612A2] A supporting structure for facing facades in building comprising vertical uprights (10), brackets (1) to support the vertical uprights on the wall to be faced, horizontal beams (20), engagement means for the beams (30) to support the horizontal beams on the uprights, plate engagement means (40) to retain the facing plates on the horizontal beams. The uprights (10) have a shape that comprises a retaining channel (16). The horizontal beams have a C-shaped body (21) with an assembly channel (22) wherefrom opposite facing retaining wings (26, 27) extend. The beam engagement means (30) are clips (31) and elastic laminated spring (32) snap engageable inside the channel of the upright. The engagement means (40) of the plates comprise elastic clips (40) snap engageable in the channels of the beams. <IMAGE>
