Abstract (en)

[origin: EP1310854A1] A lever-type control device for transmitting electrical signals, comprising a spherical element (2) for emitting at least one magnetic field that is connected to the end of a rod (3) actuated at the other end and contained within a seat that comprises means suitable to allow the rotation thereof about at least one axis that is perpendicular to the axis of the rod and passes through the center of the spherical element, the seat further comprising at least one sensor (10a, 10b) for sensing variations in the at least one magnetic field emitted by the spherical element, sending electrical signals that are proportional to the variations to an electronic board for processing. <IMAGE>
