Abstract (en)
[origin: WO0211748A1] An immune response to a target antigen is induced in a subject by administering to the subject a vaccine composition in an amount sufficient to induce an immune response to the target antigen. The vaccine composition contains a mixed pool of a plurality of DNA or RNA species encoding a plurality of mutant forms of the target antigen which are expressed of the mixed pool of nucleic acids. The vaccine compositions of the invention are administered to a subject, for example a human subject, to induce an immune response to the target antigen.
