Abstract (en)

[origin: WO0197104A1] A method (300) for billing for services comprises the steps of receiving (301) a service request, fetching (303) the service from a separate server, modifying the service into a modified service, and delivering (309) the modified service to the origin of the service request. If the requested service is a chargeable service, billing information is stored (302) after the service request is received. Furthermore, it is determined (305) if the service comprises links to further services. If those services are chargeable, prices for them are determined (306). The prices of the further services are included (307) to the service and the links in the service are modified (308) to point to local services, before the service is delivered (309) to a user. A portal system (200) is also presented.
