Abstract (en)
[origin: EP1312280A1] Container and applicator assembly comprises a neck with an outlet, and an applicator (20j). The applicator has a side wall (21j), one closed end (22j) and an open end that fits onto the container, with an inner cavity to receive the liquid during application. <??>Container and applicator assembly comprises a neck with an outlet, and an applicator (20j). The applicator has a side wall (21j), one closed end (22j) and an open end that fits onto the container, with an inner cavity to receive the liquid during application. The cavity is of variable volume, especially in response to a pressure applied to the applicator surface, and is shaped to hold the liquid product by capillary action.
