Abstract (en)  
The invention concerns an item dispenser (10) for stands including an item advancer (12) that is located in a track (13) in the bottom (11) of the dispenser, a spring that applies tension of the item advancer (12) directed toward the front part of the dispenser (10) and a securing device intended for the item advancer. The securing device includes a notch (22) in the rear part of the track, the front part of which is angled toward the front of the dispenser (10) so that the item advancer (12) is angled in a corresponding manner in its secured position. The item dispenser (10) is reactivated automatically when it is full of items because the item advancer (12) is then directed again toward the front of the dispenser (10). <IMAGE>
