Abstract (en)

[origin: EP1312559A1] A packaging basket (B) and a blank (10) for forming a packaging basket is formed from paperboard or material of like function and comprises a base (12) and a plurality of concentric, annular strips (16-16f) hinged one to the next. The radially innermost annular strip (16) is hinged to the base at a series of circumferentially spaced locations (18). The next adjacent radially outer annular strip (16a) is hinged to the radially innermost annular strip (16) at a series of circumferentially spaced locations (18) disposed intermediate the said hinged series of circumferentially spaced locations between the radially innermost annular strip (16) and said base (12). The next succeeding concentric annular strips are likewise alternately hinged one to the next so as to be adapted to form a skeletal cage-like structure when the concentric annular strips are displaced out of the plane of the base. <IMAGE>
