Abstract (en)

A junction device (1) for connecting two coplanar panels (2, 3) comprising a tenon (4) developing for at least a part of the length of at least one side (2a) of a first (2) panel and at least one mortise (5) developing for at least a part of the length of at least one side (3a) of a second (3) panel, suitable for receiving the insertion of said tenon (4). It comprises first shaped surfaces (22; 30; 40; 50) jointing each external surface (6, 7) of the first panel (2) with the lateral surface (10, 11) of the tenon (4) immediately adjacent and of second shaped surfaces (23; 31; 41; 51) jointing each external surface (8, 9) of the second panel (3) with the lateral surface (16, 17) of the mortise (5) immediately adjacent. At least one of the shaped surfaces (22, 23; 30, 31; 40, 41; 50, 51) defining at least one undercut area (24) with respect to the external surface (6, 7; 8, 9) of the panel (2, 3) which belongs to, housing the correspondent shaped surface (23, 22; 31, 30; 41, 40; 51, 50) of the other panel (3, 2). <IMAGE>
