Abstract (en)  
[origin: EP1312725A1] A wall structure composed of exterior wall panels, comprising a frame (30) and exterior wall panels (1) attached to said frame and filled with heat insulation (11), said exterior wall panels being placed one on top of the other, so that the downwardly pointing bottom web (4) of the upper exterior wall panel at least partly rests against the outwardly pointing top web (3) of the lower exterior wall panel, as well as exterior sheathing plates (31a) attached to the exterior wall panels. The panels made of metal sheet (10) also include an inner surface section (2) and a downwardly pointing top flange (6) and a bottom flange (7) provided at the edges of the top web and the bottom web. Both the top web and the bottom web are provided with thermal perforation, and the outer surface (12) of the heat insulation is located in the area of the plane (T) that passes in parallel with the inner surface section, through the top flange, and the bottom flange protrudes from said plane as much as an air gap (W1). <IMAGE>
