Abstract (en)
[origin: EP1312803A2] An automatic pump is provided to install the automatic pump regardless of direction by returning a valve connecting and shutting off an inlet pipe and an outlet pipe. <??>An automatic pump is composed of a magnetic casing(110) having an inlet pipe, an outlet pipe(115), a fluid passage and a control unit; an impeller(121) installed in the casing to flow fluid from the inlet pipe to the outlet pipe; a motor(125) rotating the impeller by the control unit; a guide member(130) installed in the passage of the casing; a cylindrical valve(140) inserted to the guide member to reciprocate linearly, and contacted to the guide member to apply hydraulic pressure of inlet and outlet pipes; and a first unit turning on and off the control unit, and contacting the valve to the guide member by moving the valve linearly in not discharging fluid to the outlet pipe. The valve connects the inlet pipe and the outlet pipe with moving linearly by pressure difference in discharging the fluid to the outlet pipe, and shuts off the pipes by contacting to the guide member in not discharging fluid. The automatic pump is installed regardless of direction.
