Abstract (en)  
The invention is related to a system and a method to deliver a fluid from a delivery tank (2) to a storage tank (1) through a delivery line (5) connected to said delivery tank (2) and to said storage tank (1). The pressure difference between the pressure in said storage tank (1) and the pressure in said delivery line (5) upstream said delivery valve (6) is detected and the fluid is only delivered to the storage tank (1) if the pressure in the delivery line (5) exceeds the pressure in the storage tank (1). <IMAGE>
