Abstract (en)
[origin: US2003095412A1] A winding apparatus (23), comprising a guiding means (25) by means of which a drawing material (32) can be led onto a cylindrical drum surface (37) of a reel (24) rotatable about its axis (26) relative to the guiding means (25) and said drawing material can be taken up onto said drum surface (37), is used for instance for adjusting the height of a suspended luminaire. In order to optically advantageously configure the connection of this winding apparatus (23) to the drawing material (32), the axis (26) of the reel (24) is oriented in the direction in which the drawing material (32) runs on entering the winding apparatus (23).
