Abstract (en)
[origin: EP1312886A1] The ammunition drum (110), for a weapon with at least two projectile channels (116), rotates around a longitudinal axis (112) and is composed of at least two drum segments (114.1-114.3) bonded together by tie bolts (120). The drum segments are arranged with one at the front and one at the rear, with a center segment between them. The neighboring drum segments have complementary system of fits, as lateral segments with at least one limit surface across the drum axis. Each segment has a projectile channel through it.
