Abstract (en)

The electronic money transaction processing system according to the present invention generates electronic money data which corresponds to a refund amount in response to a refund request from a user, and transmits this electronic money data directly to an IC card. Therefore, the user is able to instantly receive the refund amount as electronic money and, because the user is relieved of the task of paying electronic money from his or her own banking facility account to the IC card, user convenience is improved. <IMAGE>
