Abstract (en)  
[origin: WO0216047A1] The invention concerns a fluid product dispenser comprising: a reservoir (1) designed to contain the fluid product and defining an actuating wall (14), and a dispensing orifice (20) through which the fluid product is dispensed each time the wall (14) of the reservoir (1) is actuated, the reservoir (1) further containing a pump (3) defining a pump chamber (31) provided with an outlet valve (33), the pump (3) comprising an actuator (34) which is pressed upon to decrease the volume of the pump chamber, said actuator (34) being arranged beneath the actuating wall (14) of the reservoir. The invention is characterised in that a pressure line (21) connects the outlet valve (33) of the pump (3) to the dispensing orifice (20).
