Abstract (en)

[origin: WO0216052A1] The invention relates to a device for cleaning repeatedly usable implements that comprises a container (32), inside of which a brush device (38) and a wiping device (39) that is situated above the level of the cleaning liquid (33) are arranged. Said brush device (38) and wiping device (39) are indirectly or directly connected to a drainage tube (43), which can be placed inside a drainage opening (44) of the container (32) in a removable and liquid-tight manner. The brush device (38), the wiping device (39) and the drainage tube (43), together with a holding block (47), form a cleaning unit, which can be removed in its entirety from the container (32) and which, itself, can be cleaned in a dish washer.
