Abstract (en)

[origin: WO0212113A1] An Oil and Gas Valuation System includes a fully integrated web-based interactive automated database that determines a valuation of Oil and Gas Properties (90) for a business entity. The system enhances communication between the business entity and its customers by providing the price range of a specific Oil and Gas property (90) based on expected cash flow which includes revenues and expenses. The Oil and Gas Valuation System streamlines processes, speeds up initial valuation and simplifies business entity's review process.
