Abstract (en)
[origin: WO0219044A2] The invention relates to a device for the integrated monitoring, control and regulation of complex technical process flows. Said device comprises at least one central kernel with an integrated access control, a separate control for the management of tasks, threads, memories and network capacities and a hierarchic object-tree management structure comprising functions for the program-controlled or manual accumulation and distribution of data elements, the management and communication of services and central kernels, together with their corresponding data structures.
