Abstract (en)
[origin: WO0217581A1] The invention concerns a WAP server (20) connected to a radiotelephone network (18) and to at least a switching unit (22; 24) of said radiotelephone network. Said server comprises means for receiving calls or requests from portable telephones (10A, 10B). On the basis of said calls or requests, a switching unit of the radiotelephone network (22; 24) modifies the routing of communications coming from the portable telephone (10A, 10B), or addressed to said portable telephone (10A, 10B). The switching unit enables, for example, to transfer a call from a stationary terminal to a portable radiotelephone.
