Abstract (en)

[origin: WO0219734A1] The invention relates to a method for establishing communication relations. A plurality of subscribers (PA) of a communication network (KN) are allocated to at least one group (GRP). The invention is further characterized in that before a communication relation (kv) is established within the group (GRP), the communication relations that are or that can be established within the group (GRP) are checked to determine whether they exceed a predetermined maximum number (n_max). If they exceed said number, the communication relation (kv) is not established.
