Abstract (en)
[origin: EP1314459A1] The ski/snowboard (1) consists of a main section or base (2) with a sliding sole and raised front tip (8), an additional lengthwise upper panel (3) with boot fastenings. The additional panel is narrower than the base, between 30 and 60 per cent of the base's length, and has one or more lateral recesses. It is fitted into a cavity in upper surface of the base which has inward-facing lateral projections (18a, 18b) to engage with the recesses. A variant of the design can incorporate shock absorbing inserts of a rubber or elastomer material between the sides of the additional panel and the base.
