Abstract (en)  
A fuel additive comprising a) at least one wax having a refractive index of greater than 1.4550 at 70 DEG C and a melting point of less than 40 DEG C; and at least one of the following: b) at least one growth arrestor; c) at least one polar nitrogen compound; d) at least one nucleator; e) at least one comb polymer; and f) at least one alkyl phenol formaldehyde condensate. The fuel additive is effective at reducing low temperature operability of fuel oils having a cloud point of less than or equal to -15 DEG C, preferably less than or equal to -20 DEG C, and even more preferably less than or equal to -25 DEG C.
