Abstract (en)

A device (1) is proposed to descale pipes and apparatuses in heating and cooling installations. In particular, the present device removes lime or hard deposits from pipes and apparatuses in which there is passage of water. <??>In general, the device (1) comprises a reservoir (2) or tank that contains a liquid acid which must be appropriate to remove calcareous deposits. The liquid acid is delivered by means of a pump (5) and through supply and return ducts (3, 4). The pump (5) is provided with a connection to be utilized to connect a power-driven tool (7). The power-driven tool (7) is arranged on a supporting arm (6). <??>The power-driven tool (7) is a power drill but it may be whatever power-driven tool equipped with a power rotary spindle. <IMAGE>
