Abstract (en)  
[origin: EP1314849A2] The apparatus comprises a solar cell (2) which is located under a hood-shaped cover (3). The cover may be made of a translucent and/or light-controlling material. The cover is fixed to a side of a housing (1), and the solar cell is placed on the upper side of the housing and underneath the cover. The cover may be formed as polyhedron, pyramid-shaped, cone-shaped, paraboloidal or ellipsoid. The apparatus further comprises a light sensor, wind sensor (4,5), temperature sensor and condensation sensor. The control signals of the sensors (4,5) may be transmitted by radio, infrared or ultrasound to a control unit or may be transmitted directly to the electric motors which actuate the protecting mechanisms. The sensor is adjustable and/or programmable in such a way that threshold values for the light, wind, condensation or the temperature sensors are adjustable, with priorities assigned to them.
