Abstract (en)

[origin: WO0220170A1] The invention concerns a device for selectively dispensing two different liquid products (I, II) from a single container with several independent reservoirs (R1, R2) each bearing a collecting member (P1, P2) equipped with a dispensing head (11, 12) and capable of being actuated by relative displacement of the said head. The invention is characterised in that it comprises a central housing (1) bearing the reservoirs (R1, R2) peripherally and mobile relative to the associated dispensing heads (11, 12) integral with said housing (1) and comprising a key(2) selectively locking said reservoirs in fixed position relative to said heads (11, 12).
