Abstract (en)
[origin: WO0220190A1] The invention relates to a beating out device (1) for treating body-work damage, consisting of a base body (2), a support element (3) that is fixed to said base body, an electrode holder (4) and an electrode (5) which can be connected to said electrode holder (4). A lever device (6) consisting of two levers (7, 8) is provided for activating the beating out device (1) in order to adjust the height of the electrode (5). The lever (7) is U-shaped, one limb (9, 10) of this U-shaped lever (7) being mounted on the base body (2) with a pin (12). The second lever (8) is located between the two limbs (9, 10) of the U-shaped lever (7) and is rotationally connected to the base body (2). The electrode holder (4) is located in the lower limb (10) of the U-shaped lever (7), especially with the electrode (5).
