Abstract (en)

[origin: WO0220269A1] A pulling means with a coupling body (3) has a coupling hole (7) for receiving a coupling pin (8) of a device for fixing the start of a paper web or a section of a paper web. The longitudinal shaft of the coupling pin stands vertically or perpendicularly on or is slightly inclined in a vertical or perpendicular direction in relation to a horizontal plane extending in the longitudinal direction of the pulling means, which is laid out horizontally. A securing device (16) which at least temporarily prevents or hinders a coupling pin (08) from moving in the coupling hole (07) is provided on the coupling body (03). The dimensions and fittings of the coupling hole (07) are such that the coupling pin (08) can be pushed through.
